

## **CANCER (Jun 23–Jul 23)**

If you're in a committed relationship, freedom of movement will appeal and, if you're single, you may wish to commit, but in a free kind of way! For couples, much will revolve around your bigger-picture decisions in life. Mid-May through to the end of July and the month of October will be ideal for romance and holidays, both for couples and singles.

You must make space for romance in the second half of the year, otherwise your activities and home will take all your focus.

## **LEO (Jul 24–Aug 23)**

Look out, romance is about to run amok in your life, especially in January, and from May through to August and in October! During these phases, slow down and make quality time for those you love as your love life is likely to be chaotic and communications complex. Be ready to improve your communication skills.

Singles must choose where you place your romantic attention wisely, and avoid being influenced by charm and passion alone, as your relationship choices will be life changing.

## **VIRGO (Aug 24–Sep 23)**

The way you share finances, duties and space at home is set to change. So if you're single, you may decide to co-habit or get married for example and, if you're a couple and your partnership is in the doldrums, you may move or even decide to part. Stress points will arise in January, mid-year and October. Be practical as you could reach agreeable arrangements, although some soul searching may be necessary.

Peak times for romance will be in January, November and December.
